

# High pressure hose & Discharge hose

## 1 Overview

**The net system high pressure hose** is connected between the fire extinguisher container valve and the manifold, and delivers the extinguish agent in the fire extinguisher cylinder to the manifold.

**The cabinet system discharge hose** is connected between the fire extinguisher container valve and the nozzle on the cabinet, and deliver the extinguish agent in the fire extinguisher cylinder to the protected area.

## 2 Technical Parameter

### The net system high pressure hose

Model	Nominal diameter	Connect thread	Nominal working pressure
QRG32/8	32	M48*2	8MPa
QRG40/8	40	M60*2	8MPa
HRG16/17.2	16	M27*1.5	17.2MPa

### The cabinet system discharge hose

Model	Nominal diameter	Connect thread	Nominal working pressure
QRG32	32	Rc <sup>3</sup> / <sub>8</sub> "	5.3MPa
QRG40	40	Rc <sup>3</sup> / <sub>4</sub> "	5.3MPa
